Software Development Process

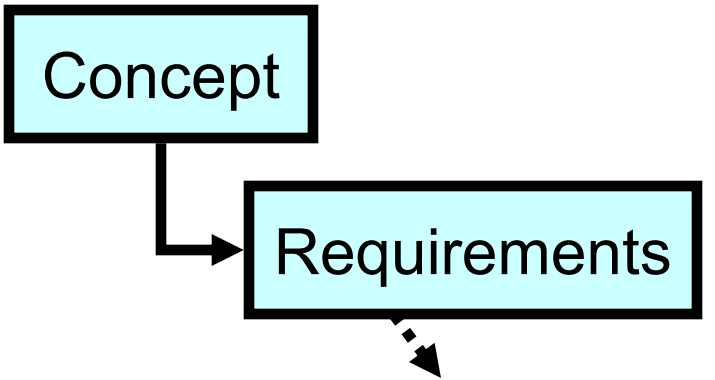

Waterfall Model

Software Development Process: Waterfall Model

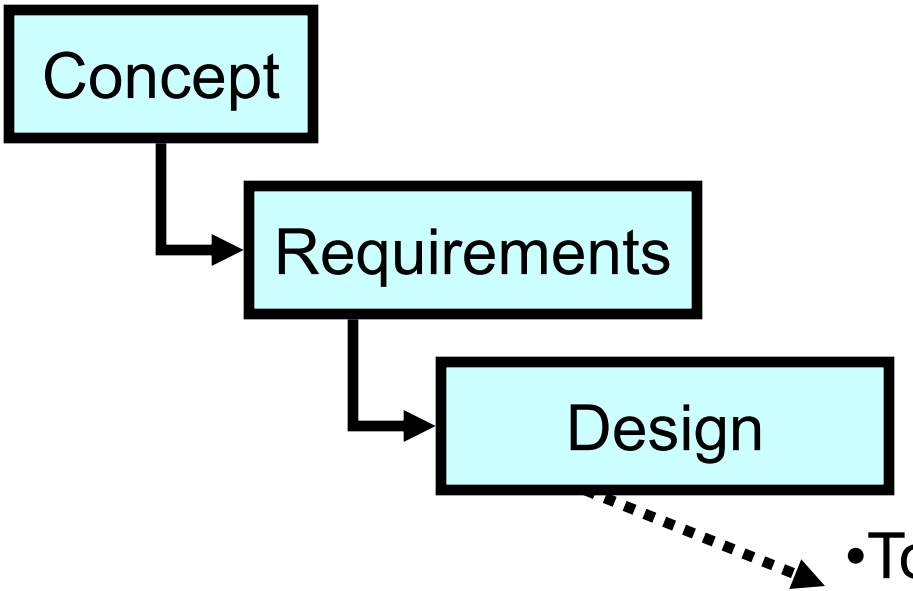

- A preliminary idea.
- May include a prototype to determine viability.
- Estimates for budgets and schedules are established.

Software Development Process: Waterfall Model

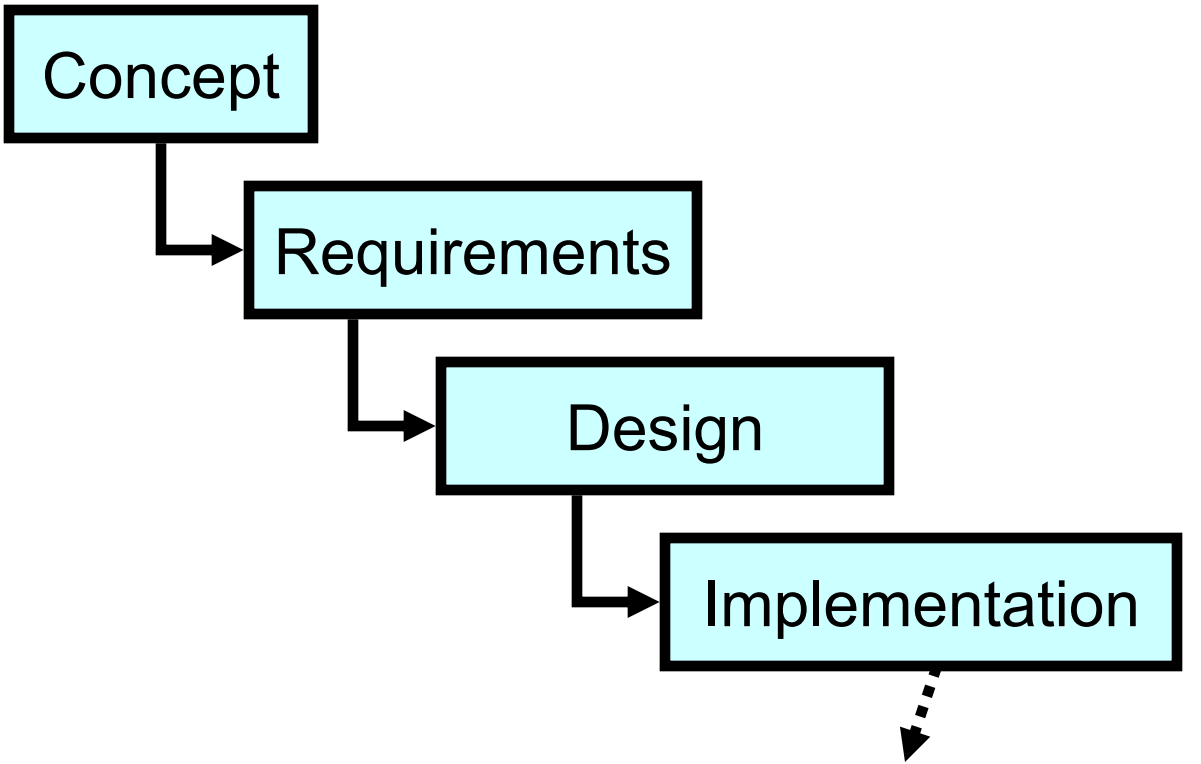

- Functional – “what” will it do.
- Performance – “how well” will it do it.
- Interface – how will it “connect” to other things.
- Data – input and output.

Software Development Process: Waterfall Model

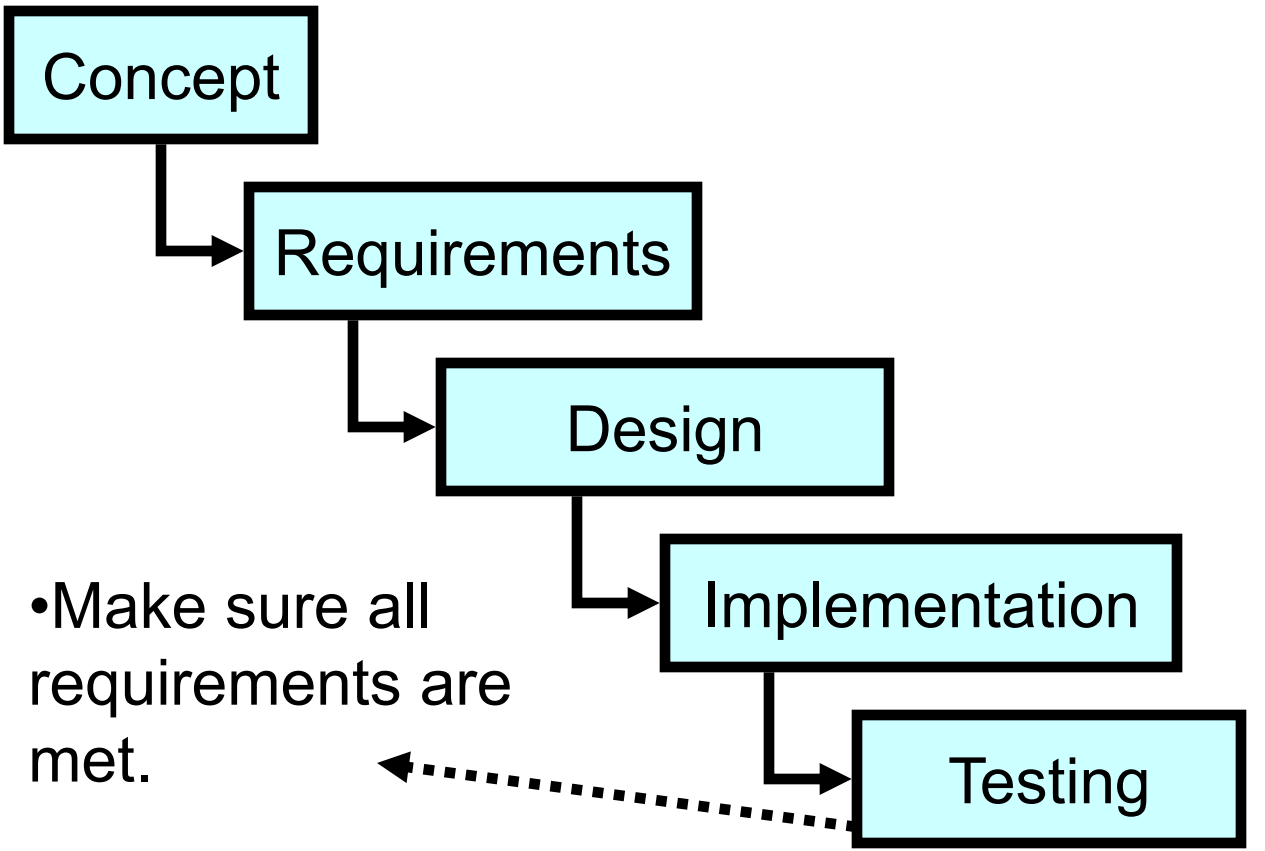

- Top level
- Detailed
- Built from the requirements.

Software Development Process: Waterfall Model

- Generate the code.
- Integrate the components.

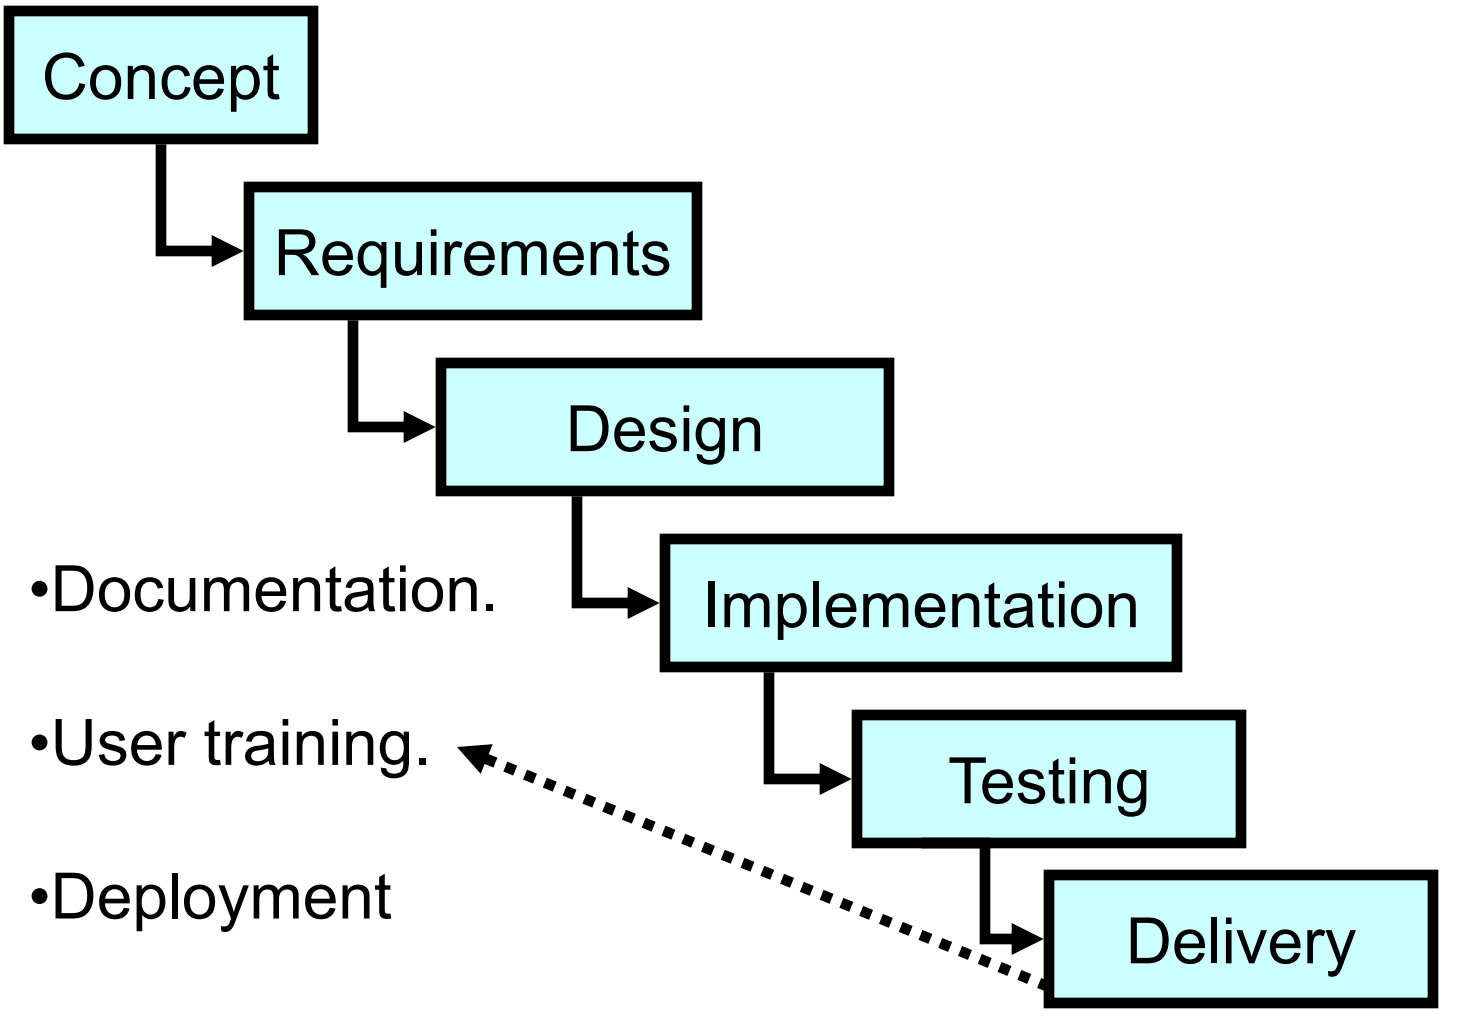

Software Development Process: Waterfall Model

•Make sure all requirements are met.

•System level testing.
